Dear Administrator,

The Nebraska State Patrol recently shared that we are upgrading the Law Enforcement Message switch. The new message switch, the Omnixx Enterprise Platform, will be a secure, cloud-based solution provided by Datamaxx. The anticipated implementation date will be in August of 2025.

Currently, the AFIS connection between your agency and the State's network is utilizing the network and firewall provided for the operation of your agency CLEIN/NCIC terminal. With the migration to the new cloud-based message switch, the current network for the message switch will no longer be necessary. To ensure your AFIS equipment remains operational, and remote support can be provided, your agency must maintain this connection to the state network.

Fortunately, you will be able to maintain this network connection using the existing network setup and hardware, with no additional changes or upgrades required. As such, the associated networking costs outlined below would be your agency's responsibility.

Agency:

Cost:

Our goal is to establish updated MOU agreements and re-bill the associated costs to the affected organizations, ensuring there is no disruption to services. If there are any questions or concerns, please don't hesitate to contact Tyler Ford, IT Supervisor, at (402) 479-3946 or Tyler.Ford@nebraska.gov.

Thank you for your time and attention to this information and your continued partnership in Public Safety.

Sincerely,

Colonel Bryan Waugh
Superintendent of Law Enforcement and Public Safety

AN INTERNATIONALLY ACCREDITED LAW ENFORCEMENT AGENCY
An Equal Opportunity Employer
